

AZ - 700 Syllabus Topics

1. Design and implement core networking infrastructure

- 1.1. Design and implement IP addressing for Azure resources
- 1.2. Design and implement name resolution
- 1.3. Design and implement VNet connectivity and routing
- 1.4. Monitor networks

2. Design, implement, and manage connectivity services

- 2.1. Design, implement, and manage a site-to-site VPN connection
- 2.2. Design, implement, and manage a point-to-site VPN connection
- 2.3. Design, implement, and manage Azure ExpressRoute
- 2.4. Design and implement an Azure Virtual WAN architecture

3. Design and implement application delivery services

- 3.1. Design and implement Azure Load Balancer and Azure Traffic Manager
- 3.2. Design and implement Azure Application Gateway
- 3.3. Design and implement Azure Front Door

4. Design and implement private access to Azure services

- 4.1. Design and implement Azure Private Link service and Azure private endpoints
- 4.2. Design and implement service endpoints

5. Design and implement Azure network security services

- 5.1. Implement and manage network security groups
- 5.2. Design and implement Azure Firewall and Azure Firewall Manager
- 5.3. Design and implement a Web Application Firewall (WAF) deployment
