

Red Hat Certified System Administrator Version 8(RHCSA)

- **Introduction**
 - Introduction to Linux
 - Introduction to Red Hat Certification (rhcsa)
 - Overview of Course contents
 - Overview of Lab setups for the Course
- **Module 1 Performing Basic System Management Tasks**
 - Lesson 1 Installing Red-Hat Enterprise Linux Server
 - 1.0 Requirements for Installation
 - 1.1 Installing Red-Hat 8.X
 - 1.2 Installing Red Hat with Custom Partitioning
 - 1.3 Lab Test -Installing Red Hat Enterprise Linux
- **Lesson 2 Using Essential Tools**
 - 2.1 Finding the Appropriate Help –
 - 2.2 Using man
 - 2.3 Finding the Right man Page
 - 2.4 Understanding vim
 - 2.5 Editing Text Files with vim
 - 2.6 Fixing a Common vim Issue
 - 2.7 Working on the Linux Shell
 - 2.8 Understanding Globbing and Wildcards
 - 2.9 Using Globbing and Wildcards
 - 2.10 Understanding I O Redirection and Pipes
 - 2.11 Using I O Redirection and Pipes
 - 2.12 Lesson 2 Lab Test - Using Essential Tools
- **Lesson 3 Essential File Management Tools**
 - 3.1 Understanding Linux File System Layout
 - 3.2 Essential File Management Tasks
 - 3.3 Finding Files
 - 3.4 Understanding Links
 - 3.5 Working with Links
 - 3.6 Working with tar
 - 3.6 Working with tar
- **Lesson 4 Working with Text Files**
 - 4.1 Understanding Regular Expressions
 - 4.2 Using Common Text Tools
 - 4.3 Working with grep
 - 4.3 Working with grep
 - 4.5 Lesson 4 Lab-Test Working with Text Files

- **Lesson 5 Connecting to a RHEL Server**
 - 5.1 Opening Local Shells
 - 5.2 Using su to Work as Another User
 - 5.3 Using sudo to Perform Administrator Tasks
 - 5.4 Connecting to a Server with SSH
 - 5.5 Understanding SSH Keys
 - 5.6 Using SSH Keys
 - 5.7 Lesson 5 Lab Using SSH
 - 5.8 Lesson 5 Lab-Test Connecting To A RHEL Server

- **Lesson 6 Managing Users and Groups**
 - 6.1 Understanding the Need for Users
 - 6.2 Creating and Managing Users
 - 6.3 Understanding User Properties
 - 6.4 Understanding User Configuration Files
 - 6.5 Creating and Managing Groups
 - 6.6 Understanding Group Membership
 - 6.7 Managing Password Properties
 - 6.8 Lesson 6 Lab-Test Managing Users and Groups

- **Lesson 7 Managing Permissions**
 - 7.1 Understanding Ownership
 - 7.2 Changing File Ownership
 - 7.3 Understanding Basic Permissions
 - 7.4 Managing Basic Permissions
 - 7.5 Understanding Special Permissions
 - 7.6 Managing Special Permissions
 - 7.7 Understanding ACLs
 - 7.8 Managing ACLs
 - 7.9 Lesson 7 Lab -Test Managing Permissions

- **Lesson 8 Configuring Networking**
 - 8.1 Understanding NIC Naming
 - 8.3 Storing Network Configuration Persistently
 - 8.4 Managing Persistent Network Configuration with nmcli
 - 8.5 Managing Persistent Network Configuration with nmtui
 - 8.6 Verifying Network Configuration Files
 - 8.7 Understanding Routing and DNS
 - 8.8 Configuring Routing and DNS
 - 8.9 Understanding Network Analysis Tools
 - 8.10 Using Network Analysis Tools
 - 8.11 Lesson 8 Lab-Test Configuring Network Settings

- **Module 2 Operating Red Hat Enterprise Linux Servers**
 - Lesson 9 Managing Processes
 - 9.1 Understanding Jobs and Processes
 - 9.2 Managing Shell Jobs
 - 9.3 Getting Process Information with ps
 - 9.4 Understanding Memory Usage
 - 9.5 Understanding Performance Load
 - 9.6 Monitoring System Activity with top
 - 9.7 Sending Signals to Processes
 - 9.8 Understanding Priorities and Niceness
 - 9.9 Changing Process Nice Values
 - 9.10 Lesson 9 Lab-Test Managing Processes
- **Lesson 10 Managing Software**
 - 10.1 Understanding Meta Package Handlers
 - 10.2 Setting up Yum Repositories
 - 10.3 Using Repositories
 - 10.4 Managing Packages with yum
 - 10.5 Using Yum Groups
 - 10.5 Using Yum Groups
 - 10.7 Using RPM Queries
 - 10.8 Lesson 10 Lab Managing Software
 - 10.9 Lesson 10 Lab-Test Managing Software
- **Lesson 11 Scheduling Tasks**
 - 11.1 Using cron vs. at
 - 11.2 Understanding Cron Execution Times
 - 11.3 Scheduling with cron
 - 11.4 Understanding anacron
 - 11.5 Using at
 - 11.6 Lesson 11 Lab-Test Scheduling Tasks
- **Lesson 12 Managing Partitions**
 - 12.1 Understanding Disk Layout
 - 12.2 Understanding GPT and MBR Partitions
 - 12.3 Creating MBR Partitions with fdisk
 - 12.4 Creating GPT Partitions with gdisk
 - 12.5 Understanding File System Differences
 - 12.6 Making the File System
 - 12.7 Mounting the File System Manually
 - 12.8 Mounting Partitions via etc fstab
 - 12.9 Creating a Swap Partition
 - 12.10 Lesson 13 Lab Managing Partitions and File Systems

- **Lesson 13 Advanced Storage IN RHEL 8**
 - 13.1 Understanding LVM, Stratis, and VDO
 - 13.2 Understanding LVM Setup
 - 13.3 Creating and LVM Logical Volume
 - 13.4 Understanding Device Mapper and LVM Device names
 - 13.5 Resizing LVM Logical Volumes

- **Module 3 Performing Advanced System Administration Tasks**
 - Lesson 14 Managing the Kernel
 - 14.1 Understanding the Modular Structure of the Kernel
 - 14.2 Working with Kernel Modules
 - 14.3 Modifying Kernel Module Behavior Through modprobe
 - 14.4 Tuning Kernel Behavior Through proc
 - 14.5 Using sysctl
 - 14.6 Updating the Kernel
 - 14.7 Lesson 14 Lab Managing the Kernel

- **Lesson 15 Managing and Understanding the Boot Procedure**
 - 15.1 Boot Procedure Generic Overview
 - 15.2 Understanding Grub2
 - 15.3 Modifying Grub2 Parameters
 - 15.4 Understanding Systemd
 - 15.5 Managing Services in a Systemd Environment
 - 15.6 Understanding Systemd Targets
 - 15.7 Switching between Systemd Targets
 - 15.8 Managing File System Mounts in a Systemd Environment

- **Lesson 16 Applying Essential Troubleshooting Skills**
 - 16.1 Changing the Root Password
 - 16.2 Troubleshooting File System Issues
 - 16.3 Troubleshooting Networking Issues
 - 16.4 Troubleshooting Performance Issues
 - 16.5 Troubleshooting RPM Dependency Issues
 - 16.6 Troubleshooting Memory Shortage
 - 16.7 Consulting Red Hat Websites for Troubleshooting Tips
 - 16.8 Lesson 16 Lab Troubleshooting Common Boot Problems

- **Module 4 Managing Network Services**
 - Lesson 17 Managing HTTP Services
 - 17.1 Understanding Apache Configuration
 - 17.2 Creating a Basic Web Site
 - 17.3 Lesson 17 Lab Configuring an Apache Web Server

- **Lesson 18 Accessing Remote File Systems and Automount**
 - 18.1 Accessing an NFS Server
 - 18.2 Accessing a Samba Server

- 18.3 Understanding Automount
- 18.4 Configuring Automount
- 18.5 Configuring Automount for Home Directories
- 18.6 Lesson 18 Lab Configuring Automount for NFS Shared Home Directories

- **Lesson 19 Managing SELinux**
 - 19.1 Understanding the Need for SELinux
 - 19.2 Understanding SELinux Modes
 - 19.3 Understanding SELinux Labels and Booleans
 - 19.4 Using File System Context Labels
 - 19.5 Finding the Right Context Labels
 - 19.6 Understanding semanage fcontext and chcon Differences
 - 19.7 Using Booleans
 - 19.8 Analyzing SELinux Log Files
 - 19.9 Configuring SELinux for Apache
 - 19.10 Lesson 19 Lab Applying SELinux Labels

- **Lesson 20 Configuring a Firewall**
 - 20.1 Understanding Firewall Configuration
 - 20.2 Understanding Firewall Components
 - 20.3 Configuring a Firewall with firewall-cmd
 - 20.4 Using firewall-config
 - 20.5 Lesson 20 Lab Creating a Basic Firewall Configuration

- **Lesson 21 Using Kickstart**
 - 21.1 Understanding Kickstart Usage
 - 21.2 Creating a Kickstart File
 - 21.3 Using the Kickstart File for Automatic Installations
 - 21.4 Using Kickstart Files in Fully Automated Datacenters
 - 21.5 Lesson 21 Lab Creating a Kickstart File1

- **Lesson 22 Configuring Time Services**
 - 22.1 Understanding Time on Linux
 - 22.2 Setting Time with timedatectl
 - 22.3 Lesson 22 Lab Configuring Server Time

- **Lesson 23 Managing SSH**
 - 23.1 Changing Common SSH Server Options
 - 23.2 Accessing the SSH Server Through the Firewall
 - 23.3 Lesson 23 Lab Configuring SSH
